First outbreak of *Tetranychus mexicanus* (spider mite) on ornamental plants of *Beaucarnea recurvata* in a professional greenhouse (Municipality Drimmelen)

1.2 Executive summary
This report concerns the first official finding of *Tetranychus mexicanus* in the Netherlands on 11 October 2018. The origin of the finding is probably Central America. The organism is not listed as a harmful organism in EU directive 2000/29/EC and is not listed on the EPPO lists. The pest was found as part of the official post-import surveillance programme. Approximately 25 plants of *Beaucarnea recurvata* were severely affected. Bleaching of the green leaves of the *Beaucarnea recurvata* pot plants was caused by emptying cells by the spider mite.

The plants are located at a retail company together in a greenhouse with other tropical plants, which were not affected. Approximately 770 *Beaucarnea recurvata* plants were present. Official measures, including chemical treatment of the affected lot, will be taken to eradicate the pest. These measures are based on a preliminary risk analysis.

Identity of the pest *Tetranychus mexicanus* (McGregor 1950), Acari, Prostigmata, Tetranychidae (spider mites)
Categorization of the pest Not listed
Reason of the notification: First report.
How the pest was found
(3) phytosanitary inspections of any type.

Official phytosanitary measures - summary

1.3 Type of notification
(2) full notification (second notification within 30 days)

2.1 Single Authority
Notification from the National Plant Protection Organization of the Netherlands – Netherlands Food and Consumer Product Safety Authority

2.2 Official contact
M.B. de Hoop. +31651584878 Email: m.b.dehoop@nvwa.nl

3. Location of presence of harmful organism
place: Made. Municipality: Drimmelen.

3.2 Map of the location.
[NVIC: Edwin de Vries of Arco van der Spek]

4. Reason of the notification and pest status
(1) First presence of the harmful organism.
### 4.3 Previous Pest status

(8) Absent: no pest records.

### 4.4 Current Pest status

(15) Transient: actionable, under eradication.

### 5. Information relating to the finding.

(5) official inspection for purposes other than phytosanitary ones.

#### 5.2 Date of finding.

8 October 2018

#### 5.3 Sampling for laboratory analysis

On October 8, several infested leaves with damage symptoms and mite colonies were enclosed in a sealed bag by an inspector.

#### 5.4 Laboratory

Mr Anton T.C. van der Sommen.
